

nitrogen

Save your N, make more M.

Don't lose your N from the start and make more M – as in money. Because, on average, more than 30% of the nitrogen you buy is lost after application. So your investment literally disappears into thin air or leaches away. But AGROTAIN® or AGROTAIN PLUS stabilizes the nitrogen to keep N in the soil for just pennies per pound. It's easy. And the result is more productive plants to increase crop yield; for example, up to 15 to 25 bu/ac more in corn in 2008¹. Ask your retailer today.

AGROTAIN maintains Nitrogen availability for your crop²
