

# i creased yield

## What could your yield be, if you weren't missing N?

Bushels are the simplest measure of success. Tests by four major universities in 2008 showed results similar to those experienced by growers. AGROTAIN® and AGROTAIN PLUS produced more bushels from normal rates of applied nitrogen for just pennies per pound. And without any changes in cultural practices or need for any added equipment. Start controlling nitrogen loss now. It's as simple as asking your retailer for AGROTAIN.

2008 harvest yields 15 to 25 more bushels of corn<sup>1</sup> with AGROTAIN nitrogen stabilizer.
